# Council Offices, Shipley, 1st July, 1932.

## To the Chairman and Members of the Public Health Committee.

#### GENTLEMEN,

I have the honour to submit my third Annual Report on the Health and Sanitary conditions of Shipley during 1931.

The tendency for the birth-rate to approximate to the death-rate has been noticeable for some years, and this year, as in 1927 and the war years 1916-1919, the number of deaths is in excess of the number of births. Whilst this may be partly due to the demand for female labour in the textile areas, it is as yet too early in my opinion to evaluate either its sociological or public health significance. What is obvious is that should the tendency continue, the district, like neighbouring textile districts, will have to depend on immigration to maintain the population at its present number.

The Ministry of Health Inquiry into Clearance Area No. I. is dealt with in the Report. The economic crisis, which left its mark on more important events, influenced also the course marked out for dealing with this property. It is, however, certain that the majority of these houses will be demolished and the environment of the re-housed tenants materially improved.

In submitting my final report, I wish to express my grateful thanks to the Chairman and Members of the Committee for the support invariably accorded me.

To my colleagues in the service of the Council, also, my indebtedness is gladly acknowledged, and in particular to Mr. Barnes (the Clerk), and Mr. England (the Chief Sanitary Inspector). The sage advice of the former and the loyal co-operation and support of the latter have done much to make my work easier, as has the eager efficiency of every member of the staff of the Public Health Department.

I am, Your obedient servant,

J. A. SCOTT, M.D., D.P.H.

#### PUBLIC HEALTH COMMITTEE.

Councillor C. Cawthorne, J.P. (Chairman of the Council).

County Councillor V. Waddilove (Chairman).

Councillor T. J. Gray (Vice-Chairman).

Councillor G. Birkeck.

Councillor L. P. Ratcliffe.

" E. Cowgill.

,, W. S. Tinsley.

,, G. H. Haley.

" G. Waddilove.

" J. Hill.

#### STAFF.

Medical Officer of Health and School Medical Officer:

J. A. Scott, M.D. (Liv.), M.R.C.S. (Eng.), D.P.H.

Medical Officer in charge of Ante-Natal Clinic:

Dr. D. HEYNEMANN (Part-time).

Consulting Gynæcologist to Joint Maternity Home:

Dr. RAWSON.

Senior Sanitary Inspector and

Superintendent of Public Cleansing:

A. ENGLAND, Cert. R. San. I.,

Meat Inspector's Certificate.

Additional Sanitary Inspectors:

J. STOREY, A. R. San. I.

W. FARNDALE, A. R. San. I.

Health Visitors:

Miss D. French, Trained Nurse, C.M.B.

Miss M. Priestley, C.M.B., S.R.N., Cert. R. Safi. I.

Shipley and Bingley Joint Maternity Home:

Matron: Miss E. M. BEAULAH, C.M.B., S.R.N.

One Sister: C.M.B. and S.R.N.

Two Certified Midwives.

#### Vital Statistics

AND

#### Social Conditions of the Area.

POPULATION.—The estimated mid-year 1931 population was 30,420, and this figure has been used for the purposes of this report. The 1931 Census population was 30,243.

PHYSICAL FEATURES OF THE DISTRICT.—Shipley lies about three miles to the north of Bradford, in the valley of the River Aire, and occupies an area of 2,182 acres. The district is hilly in character, the height above sea level varying from 200 feet on the east to 700 feet on the extreme west of the district. Geologically, the rocks underlying Shipley consist partly of members of the millstone grit series, and partly of members of the super-imposed lower coal measures. Masking these strata is a variable thickness of boulder clay, while near the river there is some accumulation of river drift. A fuller description of the geological character of the district, furnished by Mr. W. P. Winter, was printed in the previous Annual Reports.

INDUSTRIES.—The chief industries are those connected with the Wool, Worsted, Dyeing and Textile Trades. In 1921 these trades gave employment to 2,150 men and 3,389 women. Other businesses carried on include Metal, Motor and Machine Works, Jam Manufacture, Wood, Stone and Brick Works.

BIRTHS.—413 net births, of which 13 were illegitimate, were registered during the year, giving a birth rate on the estimated population of 30,420, of 13.57, as compared with 13.55, 14.5, and 15.9 for the preceding three years. The 13 illegitimate births were 3.1% of the total births registered.

STILL-BIRTHS.—22 legitimate children were still-born during the year, the proportion of still-births to 1,000 total births being 50.57.

DEATHS.—The net deaths for the district were 200 males and 227 females, giving a total of 427, and a death rate of 14.03 as compared with 12.7, 13.5 and 11.9 for the preceding three years. 31.4% of the deaths occurred in public institutions.

INFANTILE MORTALITY.—The infantile mortality rate of 73 deaths of children under 1 year per 1,000 births shows a gratifying drop, and is the second lowest in the history of the district, the lowest being 65 in 1928. It is noteworthy that more than half (16) of the thirty infant deaths occurred in the first month, and one third of the total in the first week, of life. Six of these "under one week" deaths were due to premature birth, and whilst no information is available as to the antenatal care received by the mothers, attention to this point would possibly diminish the number of premature births.

Seven infants died from pneumonia, two from bronchitis, one from measles and three from whooping cough. The two infectious diseases mentioned are fatal because of the respiratory complications they cause, so that 43% of the infant deaths were due to respiratory diseases, in which environment and knowledge of hygiene can play an important preventive rôle.

It is therefore reasonable to assume that many of the deaths discussed above are preventable—in the first group by ante-natal care and in the second by the application of modern hygienic knowledge.

#### General Provision

OF

#### Health Services of the Area.

#### Nursing in the Home.

- (a) GENERAL: Nursing in the home is carried out by the Shipley District Nursing Association. Two whole-time Nurses are employed in this work. Their duties are confined to general nursing, no midwifery or infectious disease work being undertaken. 4,304 visits were paid to homes during 1931. There is no co-ordination of the work with that of the Local Sanitary Authority.
- (b) INFECTIOUS DISEASES: No arrangements have been made by the Council for the provision of home nursing for infectious disease.

#### Midwives.

Seven trained and one untrained Midwives practise in the district. Four of these are employed at the Shipley and Bingley Joint Maternity Home and four in district practice.

#### Laboratory Facilities.

Clinical material (sputum, swabs, etc.), is examined at the West Riding County Laboratory, Wakefield, similar facilities being available to general practitioners in the area. Occasional milk samples are also sent to the County Authority for examination. The Laboratory of the North Riding County Council at Scarborough has also been utilised for milk examination during the year.

Facilities for the bacteriological and chemical examination of water are available locally at the laboratory of the Sewage Works.

#### Legislation in Force.

The following legislation relating to Public Health is in force in the area:—

#### LOCAL ACTS.

#### HOSPITALS.

- (1) GENERAL.— (a) The Sir Titus Salt's Hospital, Shipley, has accommodation for thirty cases in ten wards. The Hospital is a voluntary one, and possesses an Operating Theatre, X-ray, Ultra Violet Light and Radiant Heat Apparatus, and a Massage Room. The services of an Honorary Pathologist, Honorary Radiologist and Honorary Dental Surgeon are available, in addition to that of the Honorary Medical and Surgical Staff. 502 in-patients and 2,054 out-patients were treated during the year.
- (b) The Bradford Royal Infirmary is also largely utilised by the inhabitants of the area.
- (2) CHILDREN. The Bradford Children's Hospital serves the needs of the district for hospital treatment for children. A subscription of £10 10s. 0d. is paid by the Local Education Authority to this Hospital.
- (3) MATERNITY. The Shipley and Bingley Joint Maternity Home, of ten beds, was opened on the 1st April, 1931, by the Minister of Health, and is adequate for the needs of the two districts.
- (4) FEVER. Fever cases are treated in the Morton Banks Isolation Hospital, which contains 120 beds, and is provided by the Keighley, Bingley and Shipley Joint Hospital Board. The hospital is about seven miles from Shipley, and therefore within easy ambulance reach.
- (5) SMALLPOX.—The Joint Authority control two institutions which are at present reserved for smallpox cases:
  - (a) Heaton Royd Hospital, Shipley.
  - (b) Upper Heights Hospital at Stanbury.

Stoney Ridge Hospital, Shipley, is primarily an Infectious Disease Hospital which was converted to an emergency Smallpox Hospital during the 1926-27 Keighley epidemic, but following a decision of the Joint Hospital Board, it will in future be used as a reserve hospital for Infectious Fevers.

- (6) TUBERCULOSIS. The Tuberculosis services are administered by the West Riding County Council. The institutions most frequently utilised for Shipley cases are the Middleton-in-Wharfedale Sanatorium (300 beds for men), the Eldwick Sanatorium, near Bingley (39 beds for children), and the Morton Banks Sanatorium, near Keighley (63 beds for women).
- (7) CHRONIC SICK. Institutional accommodation for the chronic sick is available at the Clayton Institution, which is controlled by the local Guardians Committee of the Public Assistance Committee of the West Riding County Council.
- (8) ORTHOPÆDIC.—Orthopædic cases are referred to the Bradford Royal Infirmary for treatment.

#### Maternity and Nursing Homes.

The County Council are the local supervising authority under the Nursing Homes Registration Act, 1927, four Maternity Homes in Shipley being registered.

The Shipley and Bingley Joint Maternity Home, which was open for nine months during the year, admitted 63 maternity cases and 2 premature infants. During the short period in which it has been opened it has fully justified its existence, and is promising to become the central feature of the maternity work of the district. Private cases are admitted at the rate of £3 10s. 0d. per week if resident in either Shipley or Bingley, and at £4 4s. 0d. per week if outside these districts. Cases are also admitted on the recommendation of the respective Maternity and Child Welfare Committees of Shipley and Bingley at reduced rates, the charges being based on the family income. addition, two beds have been guaranteed by the County Council, and several county cases admitted. Operative facilities are available in the Home, and private practitioners have full facilities for looking after their own cases. consulting Gynæcologist is also available.

An ante-natal clinic is held on Monday and Tuesday afternoons, from 2 to 4 o'clock, for all cases booked for confinement in the Home.

#### Ambulance Facilities.

(a) FOR INFECTIOUS CASES: Two motor ambulances are provided by the Joint Hospital Board, and are maintained at Morton Banks Hospital.

In view of the distance of Morton Banks (some seven miles) from Shipley, the Council early in 1928 provided an ambulance to convey home, patients discharged from hospital. This ambulance, after disinfection, is used as an emergency ambulance for accident and non-infectious cases.

(b) FOR NON-INFECTIOUS AND ACCIDENT CASES: An ambulance solely for these purposes is kept at the Manor House Depôt, Shipley, in addition to the one mentioned in the previous paragraph.

# Sanitary Circumstances of the Area.

#### WATER.

A description of the gathering grounds, acidity tests and subsequent treatment, etc., was included in my 1929 report.

The water mains have been extended during the year to supply new property in course of erection. Mr. Dawson, the Council's Surveyor, has kindly supplied the following details of improvements to the water mains which were in progress during the year:—

"During the past year the new 10-inch diameter trunk water main from Baildon Green to Shipley Market Place was completed. The length of the main is 1,350 yards.

The 10-inch diameter trunk water main from Green Lane, Baildon, to the Kirkstall, Otley and Shipley main road (top of Ives Street), the length of which is 500 yards, and the 9-inch diameter trunk water main from the Rosse Hotel to the Carnegie Library, the length of which is 2,000 yards, were also completed.

The 15-inch diameter trunk water main from Graincliffe Reservoir to the town, including the 5-feet 6-inch diameter culvert under the canal (to take both highlevel mains), and the culvert under the railway, is now completed. The length of this main is 5,070 yards, and the estimated cost £24,000.

During the year the renewal of the 12-inch defective conduit by 12-inch diameter concrete-lined iron pipes, from Graincliffe Reservoir to the Service Reservoirs in West Lane, Baildon, has been completed. The total length is 4,100 yards, and the estimated cost £10,000.

The 15-inch and two 10-inch mains are executed under grants from the Unemployment Grants Committee.

District mains have been extended in the Nab Wood district, Wrose Hill and Leeds Road, Windhill, to supply new property in course of erection."

#### Analyses.

- (a) CHEMICAL. The chemical analysis of the water remains satisfactory, the details being substantially as printed in previous Annual Reports.
- (b) Bacteriological.—The detailed analyses of the water to the extent of some twelve samples monthly has been continued throughout the year, and the water chlorinated as a routine. The works described on page 24 will so improve the distribution system that it will soon be possible to revert to the regular monthly examination of the high and low-level supplies, and to omit chlorination. Representative counts carried out by Mr. Hurley, B.Sc., the Council's Chemist and Sewage Works Manager, are as follows:—

	Date.	Source.	С	Agar ount er c.c.	(	elatine Count er c.c.		B. Coli. in

<sup>\*</sup> After Chlorination.

#### Rivers and Streams.

Action with a view to checking pollution is undertaken by the West Riding Rivers Board. Local conditions are extremely satisfactory, in that the whole of the manufacturing trade waste of the district is dealt with at the Council's Sewage Works.

#### Drainage and Sewage.

I am indebted to Mr. Hurley, the Council's Chemist and Sewage Works Manager, for the following report:—

"During the year there was no interruption of the purification process, and, considering the abnormal strength of the incoming sewage, the results were as good as could be expected. About 710,000,000 gallons of sewage received full treatment, in addition to storm water which received tank treatment only.

The residues from the purification process consisted of 1,850 tons of detritus and 8,530 tons of dried sludge. This residual material was tipped on the works, and 715 tons of destructor clinker and 360 tons of excavated earth helped to make a firm tip. For re-ashing the sludge drying beds, 842 tons of crushed destructor clinker were employed, whilst this was augmented by fine boiler ashes from an old tip situated on the works.

Numerous improvements have been made to the works with a view to both efficiency and economy. Rail track is now utilised entirely for removing sludge from the drying beds. In this way wheel-barrow labour has been eliminated, and sludge disposal has thus become cheaper, speedier and easier. A good road has been made to the destructor and the mechanics' shop, and the yards near by have been concreted. Concurrently with this work, the lay-out of the rail track was altered to provide a double line near Shipley Tank. The results of this alteration have exceeded expectations.

The re-constructed works were officially opened by the Minister of Health in March, 1931, and the Yorkshire District of the Association of Managers of Sewage Disposal Works paid us a well-attended visit in September.

A considerable amount of laboratory work has been carried out on the treatment of both sewage and trade effluents, especially gas liquor. Present investigations aim

at the discovery of a satisfactory precipitant for our very strong Shipley sewage, to release the strain on the filters.

During the period under review there were no complaints from the West Riding Rivers Board."

#### Drainage.

The following work has been carried out following investigations by the Sanitary Inspectors:—

House Drains renewed ... ... 41
House Drains cleared of obstruction ... 120
House Drains repaired ... ... 43

#### Closet Accommodation.

Details of conversions from common privies to water carriage system since 1903 are given in the Sanitary Inspector's Report. During the present year, 4 privies were abolished or converted into water closets.

There were at the end of 1931 the following types of closets in the town:—

Water Closets ... ... 7,747
Waste or Slop Water Closets ... 1,957
Common Privies ... ... 31
Pail Closets ... ... 20

#### Scavenging.

I am indebted to the Senior Sanitary Inspector and Superintendent of Public Cleansing for the following details of house and trade refuse removal:—

- "6,840 Galvanized Dust Bins are cleansed one or more times weekly.
  - 543 Dry Ashplaces are cleansed monthly.
    - 31 Privies are cleansed monthly.
    - 20 Pail Closets are cleansed weekly.

During the year 932 ashpits were abolished and 1,429 dust bins substituted.

#### Disposal of House Refuse.

4,000 tons (42·10%) to the Destructor.

5,473 tons (57.90%) to the Tips.

Total: 9,473 tons.

This does not include refuse from the Public Abattoir and Stables."

Street cleansing is supervised by the Council's Surveyor.

#### Sanitary Inspection of the Area.

The following summary of inspections made and action taken is supplied by the Senior Sanitary Inspector, in accordance with Article 19 of the Sanitary Officers' Order, 1926:—

#### Number and Nature of Inspections made by the Sanitary Inspectors during 1931.

", abated during the year			876

#### Smoke Abatement.

442 smoke observations were taken during the year, and, as a result, 11 premises were visited for the purpose of interviewing owners, engineers and stokers. 21 Informal and 25 Statutory Notices were served on owners of premises where infringements of the Bye-Laws had occurred.

The subject received some public prominence during "Health Week" in March, when a Lantern Lecture was given by Professor Johnstone Jervis, Medical Officer of Health of Leeds, and Honorary Secretary of the Regional Smoke Abatement Committee, on "Smoke and Health."

The National Smoke Abatement League of Great Britain also provided a stall in the Health Exhibition illustrating the importance of smoke prevention.

# Premises and Occupations which can be Controlled by Bye-Laws or Regulations.

- (1) COMMON LODGING HOUSES.—One only exists in the town, the condition on inspection being found satisfactory.
- (2) KNACKER'S YARD.—Four visits of inspection were made during the year.

(3) OFFENSIVE TRADES.—The list of offensive trades in the district is as follows:—

Tripe Boilers	••	2
Gut Scrapers	• • • • •	2
Bone Boiler		1
Fat Boiler		1
Artificial Manure Wo	orks	1

51 visits of inspection were made during the year.

(4) TENTS, VANS AND SHEDS.—There were still five caravans occupied at the close of the year.

#### Health Education.

The Health Week held from March 2nd to 6th, 1931, was described in last year's Report. It will be worth while repeating this effort in the near future, and the facilities offered by the British Social Hygiene Council should help in the organization of an attractive Health Week at a very reasonable cost.

#### Rag Flock Acts, 1911 and 1928.

No premises are known in the district in which Rag Flock is manufactured, used or sold.

### HOUSING.

## (a) Statistics.

1.	Inspection of Dwelling-houses during the Year:—	
	(1) Total number of dwelling-houses inspected for housing defects (under Public Health or Housing Acts)	520
	(2) Number of dwelling-houses (included under sub-head (1) above) which were inspected and recorded under the Housing Consolidated Regulations, 1925	54
	(3) Total number of Inspections made	520
	(4) Number of dwelling-houses needing further action	185
	(a) Number considered to be in a state so dangerous or injurious to health as to be unfit for human habitation	146
	(b) Number (excluding those in sub-head (a) above) found not to be in all respects reasonably fit for human habitation	<b>3</b> 9
2.	Remedy of Defects during the Year without Service of formal Notices:—	
	Number of defective dwelling-houses rendered fit in consequence of informal action by the Local Authority or their officers	59
3.	Action under Statutory Powers during the Year:—	
	A.—Proceedings under Sections 17, 18, 23, Housing Act, 1930:	
	(1) Number of dwelling-houses in respect of which notices were served requiring repairs	30
	(2) Number of dwelling-houses which were rendered fit after service of formal notices	18
	(a) By owners (b) By Local Authority in default of owners	18 0
	B.—Proceedings under Public Health Acts:	
	(1) Number of dwelling-houses in respect of which notices were served requiring defects to be remedied	<b>3</b> 94
	(2) Number of dwelling-houses in which defects were remedied after service of formal notices	310
	(a) By owners	310
	(b) By Local Authority in default of owners	0

	C.—Proceedings under Sections 19 and 21 of the Housing Act, 1930:
2	(1) Number of representations, etc., made in respect of dwelling-houses unfit for habitation
1	(2) Number of dwelling-houses in respect of which Demolition Orders were made
1	(3) Number of dwelling-houses demolished in pursuance of Demolition Orders
	D.—Proceedings under Section 20 of the Housing Act, 1930:
1	(1) Number of separate tenements or underground rooms in respect of which Closing Orders were made
1	(2) Number of separate tenements or underground rooms closed in pursuance of Closing Orders
0	(3) Number of separate tenements or underground rooms, the Closing Orders in respect of which were determined, the tenement or room having been rendered fit
	E.—Proceedings under Sections 11, 14 and 15 of the Housing Act, 1925:
29	(1) Number of dwelling-houses in respect of which Closing Orders were outstanding
0	(2) Number of above houses in respect of which Closing Orders were determined, houses having been made fit
1	(3) Number of above dwelling-houses in respect of which Demolition Orders were made
1	(4) Number of above dwelling-houses demolished in pursuance of Demolition Orders

#### (b) Housing Conditions.

#### (1) General Observations.—

CLEARANCE AREA, No. 1.—An Official Representation of 90 houses and 7 other buildings (lock-up shops) was made last January, and the Official Inquiry by the Ministry of Health held locally last September. Whilst the final decision of the Ministry had not been made by the end of the year of this Report, it is certain that much of this insanitary property will be demolished, and the remainder considerably improved

before consent to its continued existence is given. Considerable opposition at the Inquiry was encountered, principally on the ground that the owners had been given no opportunity to submit improvement proposals, and secondly on the ground that the financial crisis which had just occurred rendered the moment inopportune for the spending of money on rehousing, etc.

#### (2) Sufficiency of Supply of Houses.—

(a) EXTENT OF SHORTAGE.—At the end of the year there were 515 "live" applications appearing in the Register, and upon analysis the following results are revealed:—

	APPLICATIONS.		
Where Resident.	From Tenants.		om persons partments.
In proposed clearance areas	69	• • •	3
In other parts of the district	249	• • •	100
Without the district but where applicants are employed in the urban district	47		8
Without the district and where applicants are not employed in the urban district	32	• • •	7
	328	• • •	115
Total	397		118
	1	515	

It will be observed that roughly two-thirds of the applications are from persons residing in the district who desire to remove from their present surroundings.

Of the 515 applications registered at the end of December, 1931, the resident population in the houses of the applicants consist of approximately 552 males, 601 females, and 554 children under the age of 14 years, with lodgers or sub-tenants to the number of 68 males, 81 females and 26 children.

The applications received from the 249 occupiers of houses in the district not affected by proposed clearance areas show the present and requested accommodation of the applicants as under. (Attics and box-rooms have been ignored):—

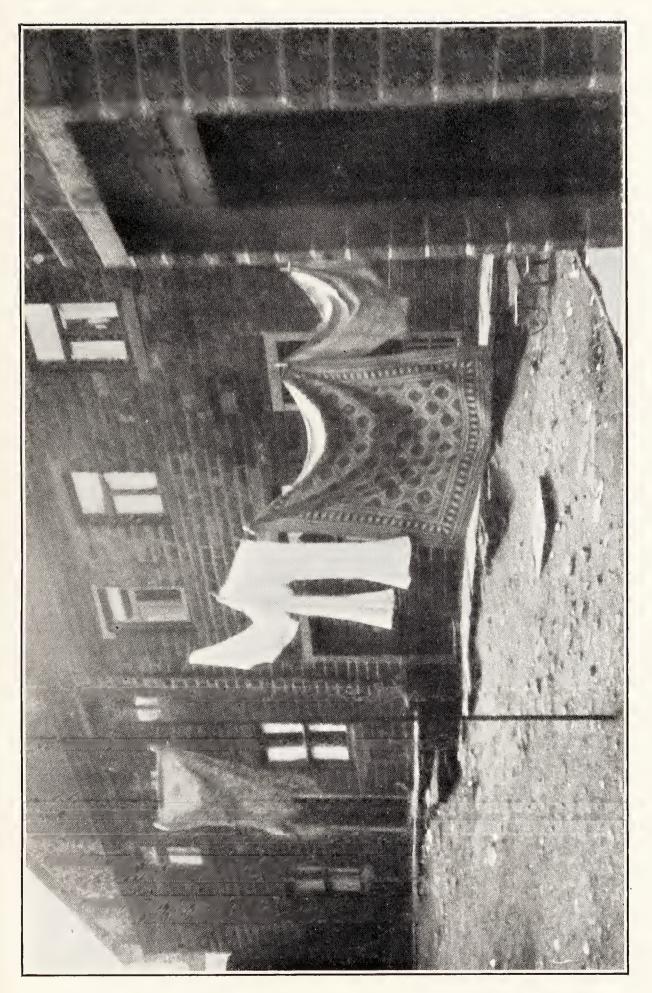

Present Accommoda and Number of Bedro		ACCOMMODATION APPLIED FOR.			
None. One. Two. Three	e. Four.	Non-Parlour.	Parlour.		
11 78 62 13	3	2 bedrooms: 167			
1 25 25 8	4	3 bedrooms: 63			
0 4 8 5	1	3	bedrooms: 18		
0 1 0 0	0	4	bedrooms: 1		
12 108 95 26	8	2 <b>3</b> 0	19		
			249		

- (b) CHANGES IN POPULATION.—From the information available, the population is increasing slowly, a figure of 30,000 being sufficiently accurate for ordinary purposes. The 1931 Census figure was 30,243. The estimated mid-year population was 30,420.
- (c) Housing Sites.—The supply of suitable housing sites is limited by the hilly nature of the district, but is sufficient for present needs. The Busy Lane site and the Carr Lane site, which have already been approved by the Ministry of Health, have each 50 houses in the course of erection. The majority of these will be reserved for the rehousing of dispossessed tenants in the Leeds Road Clearance Area, and it is hoped to have these ready early in the ensuing year. The Busy Lane Housing Area includes 12 bungalows for aged persons.
- (3) Overcrowding.—Overcrowding cannot be regarded as an urgent problem. One or two instances have come to the notice of the Health Department during the year in which families were living in overcrowded conditions, and in view of

the difficuty of providing other accommodation remedial action has not been taken, but it has been found possible in some of these to minimise the nuisance.

(4) Fitness of Houses.—As described in previous reports the outstanding defect of the older houses has been the number per acre, resulting in deficiency of air space, but this is a problem which is not capable of immediate eradication. Practically every house in the district however, has its own internal water supply, and good progress has been made with the substitution of water closets for any existing privy middens. A considerable number of houses still have no water closet or other sanitary convenience within their own curtilage, and in these cases the accommodation has to be shared in common with one or two families.

Clearance Area No. 1.— The following photographs illustrate typical features of the area. Also the houses erected by the Council at Busy Lane and Carr Lane to re-house the dispossessed tenants.

Nos. 1, 3, 4, 5 and 6 Kendall Square, showing the unpayed and undrained street surface and the defective condition of the payements.

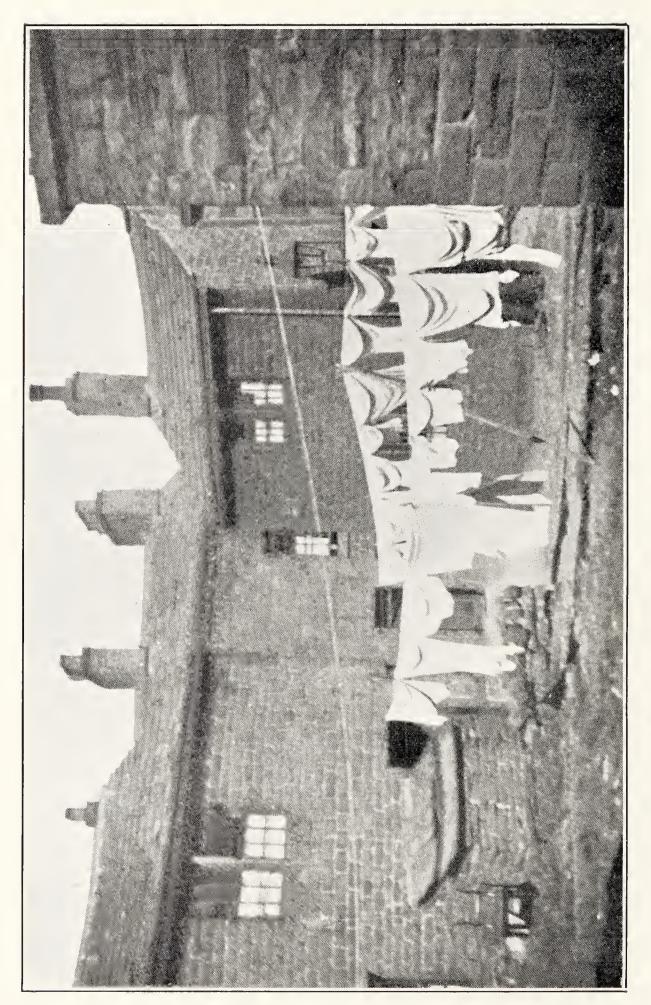

No. 7 Kendall Square, as an obstructive building to 9 and 10 Kendall Square (in the background) and to No. 6 Kendall Square (wall shown on extreme right). The condition of a further portion of the yard surface is also indicated.

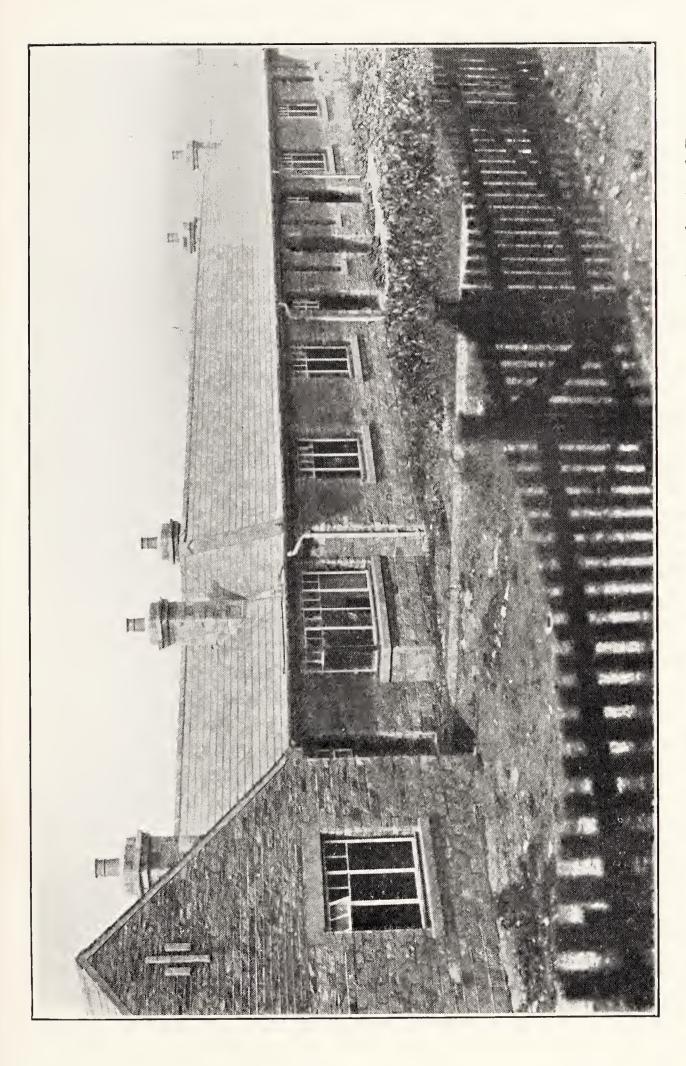

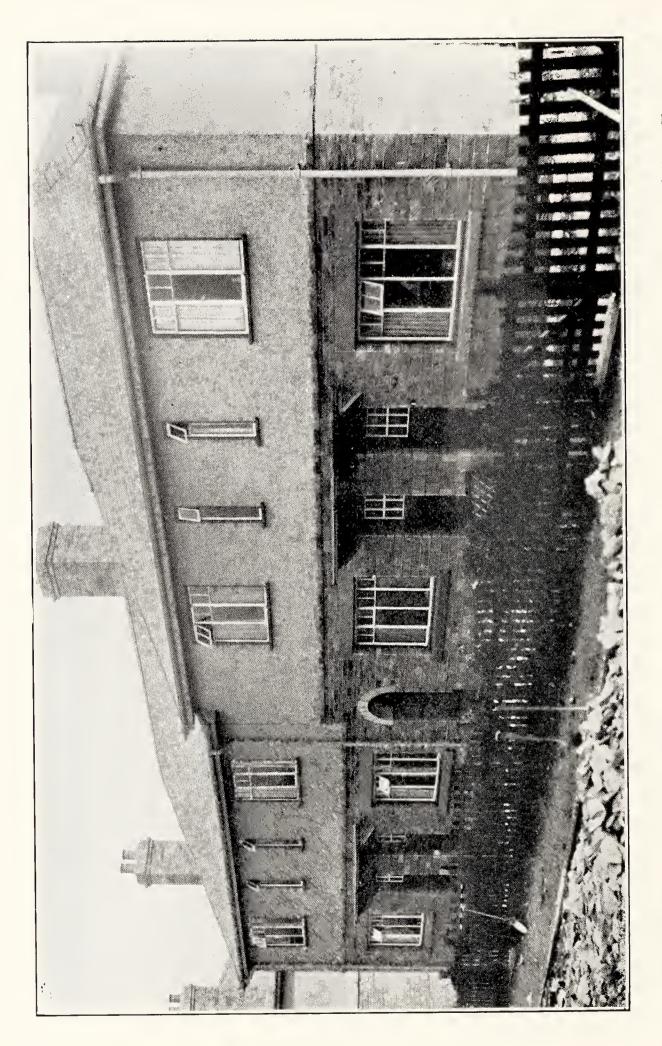

Part of the block of one-roomed Tenement Houses, 2 to 16 Gladstone Place, with the block of Back-to-back Houses, 18 to 32 Gladstone Place, above them. Showing the 3-ft. landing in front of 18 to 32 Gladstone Place, and the "pillar drains" supporting the landing, which are used for the deposit of slop water.

The irregularity of the pavement and unsurfaced condition of the street are illustrated.

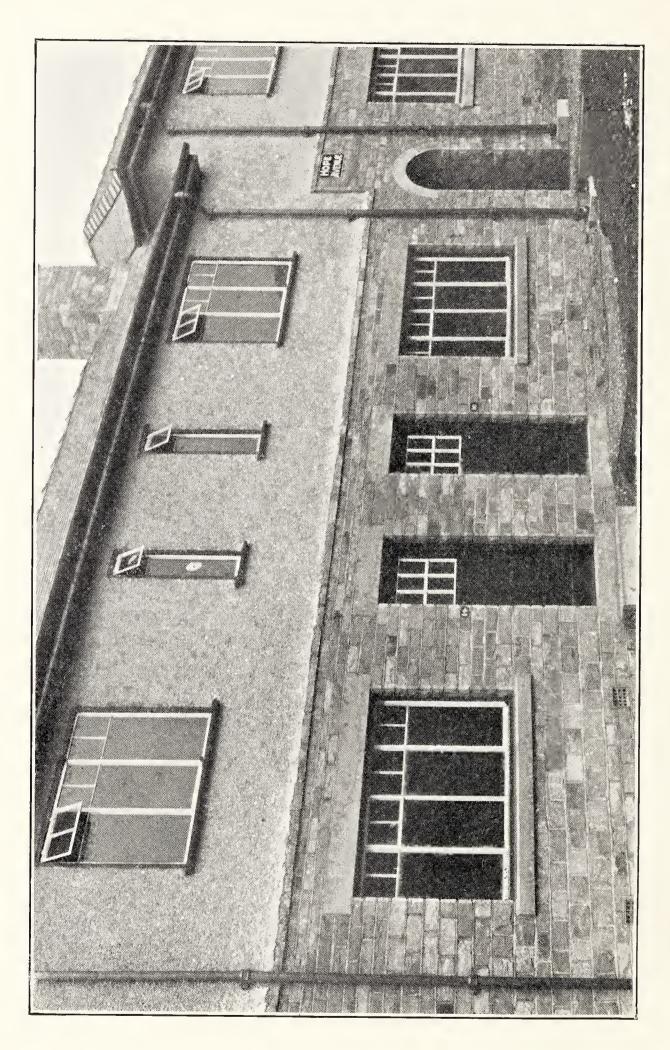

No. 1 Old Hall (on left), the entrance to Old Hall, and the unpaved and undrained condition of the yard surface.

General View of Houses, showing A. 2 and A. 3 Types.

#### Inspection and Supervision of Food.

#### (a) MILK SUPPLY.

14 Cowkeepers are registered in the district, 96 resident and 27 non-resident milk sellers. The various farms, etc., contain 27 cow-sheds, housing 170 milk cows.

Three retailers are licensed to sell "Certified" milk and three to sell "Grade A" milk. One "Certified" and three "Grade A" supplementary licences have also been issued.

A quarterly inspection of all the dairy cattle in the district is carried out by the Veterinary Staff of the County Council. 179 visits of inspection to cowsheds, dairies, etc., were, in addition, made by the Sanitary Staff.

Five samples of "Certified" milk were submitted for bacteriological examination during the year, together with eight samples of ordinary milk. Two of the samples of ordinary milk were not satisfactory.

#### (b) MEAT AND OTHER FOODS.

Visits to Public Abattoir for Meat Inspection 96 Visits to Market Stalls and Shops ... 260

Some seven tons of meat (exclusive of organs) was condemned at the Public Abattoir. This is about the same amount as was similarly treated during the previous year.

#### (c) ADULTERATION.

The West Riding County Council are the Food and Drugs Authority for the area. The following is the number of samples taken in Shipley during 1931:—

Milk	• • •	• • •	24
Drugs	• • •	• • •	2
Other Foods	• • •	• • •	28

These were all found to be "Genuine" with the exception of one sample of Potted Meat, which was found to contain excess water, and a caution was issued to the vendor.

## FACTORIES, WORKSHOPS AND WORKPLACES.

(3) Outwork in Unwholesome Premises.

No instances discovered.

<sup>†</sup> Excluding offences relating to Outwork and offences under the Sections mentioned in the Schedule to the Ministry of Health (Factories and Workshops Transfer of Powers) Order, 1921.

<sup>†</sup> Thirty-three of these have been remedied during the present year, and the remainder have been put in hand.

# Prevalence of, and Control over, Infectious and Other Diseases.

The following table shows the incidence of the notifiable Infectious Diseases according to the months in which they occurred, the ages of the patients, and the ward distribution of the cases.

# Notifiable Diseases (other than Tuberculosis) during 1931.

YEAR	Smallpox	Measles	Scarlet Fever	Diphtheria	Whooping Cough	Typhoid Fever	Diarrhœa	Totals	Zymotic Death-rate
	Sm	Me	Sca	Dig	W	Tyl	_ Dia	To	Zyı

- (a) SMALLPOX.—No cases occurred during the year.
- (b) SCARLET FEVER.—53 cases occurred in the year. The attack rate per 1,000 inhabitants was 1.74, as compared with 5.27 in 1930, and 10.2 in 1929.

No deaths occurred.

45 cases (85%) were treated in hospital.

Three "return cases" arose during the year == 6.6% of the cases treated in hospital.

(c) DIPHTHERIA.—18 cases were notified during the year, giving an attack rate of 0.59 per 1,000 inhabitants, as compared with 0.81 and 1.08 in 1930 and 1929.

Two deaths occurred, the death-rate being 0.06 per 1,000 inhabitants, and the fatality rate 11.11 per 100 cases.

11 cases (61.1%) were treated in hospital.

(d) MEASLES.—This disease is not notifiable in Shipley. Partial information is received from Head Teachers, who notify cases coming to their knowledge to the Medical Officer. During the year, 63 cases in school children were notified, 62 of these referring to children in Infants' Departments.

Two deaths occurred from Measles, giving a death-rate of 0.06 per 1,000 inhabitants.

(e) Whooping Cough.—Not notifiable. Six deaths occurred during the year, the death-rate being 0.19 per 1,000.

No arrangements are in force in the district either for the hospital treatment or home nursing of Measles and Whooping Cough.

- (f) DIARRHŒA.—No deaths of infants under two years of age occurred from Diarrhœa, the number for the previous year being five. The rate expressed as per 1,000 live births is 6.0 for the country as a whole.
- (g) CANCER.—50 deaths from Malignant Disease were registered, this being the third most frequent cause of death. The death-rate from this group as a whole is 1.64 per 1,000 inhabitants.

- (h) PNEUMONIA.—32 deaths occurred from all forms of Pneumonia. Death-rate 1.05.
- (j) Tuberculosis. The Tuberculosis Dispensary, situated in Kirkgate, is under the control of the West Riding County Council. A weekly session is held on each Monday at 10 a.m. The number of new cases, both Pulmonary and Non-Pulmonary, notified during the year, and the number of deaths are shown in the following table:—

		New (	CASES.		DEATHS.				
AGE PERIODS.	Pulmo	onary	No Pulm		Pulmo	onary	No Pulmo		
	М.	F.	М.	F.	M.	F.	M	F.

18		Textile Burler.			
20	• • •	Yarn Reeler.			
20	• • •	Worsted Spinner.			
21	• • •	Housewife.			
28	• • •	Servant.			
30	• • •	Housewife.			
32		Housewife.			
34	• • •	Housewife.			
42	• • •	None.			

The Phthisis death-rate was 0.75, compared with 0.54 for 1930. No deaths were registered from Non-Pulmonary Tuberculosis, the death-rate being 0.135 for 1930.

No previous notification of the disease had been received in seven instances where deaths from Pulmonary Tuberculosis were registered.

#### Public Health (Prevention of Tuberculosis) Regs. 1925.

No action was taken under the Regulations during the year. They give power to regulate the employment of tuberculous persons in the milk trade.

#### Public Health Act, 1925, Section 62.

This section gives power in certain circumstances for the compulsory removal to hospital of patients suffering from Tuberculosis. No action was taken during the year.

#### Prevention of Blindness.

No action was taken during the year under Section 66 of the Public Health Amendment Act, 1925.

### Maternity and Child Welfare.

The Maternity and Child Welfare Services in the district are under the control of the Council. The Child Welfare Centre is opened on two sessions weekly, the Medical Officer of Health and Health Visitor receiving invaluable help from an energetic Voluntary Committee. During the year the Wednesday afternoon centre was discontinued on account of the disappointing use made of this session.

#### ATTENDANCES.

	Under 12 months.		1 to 5	years.	Total	Average Attend-	
	First Attend- ance	Total	First Attend- ance	Total	Attend- ances	ance per Session.	
1930 1931	270 272	3534 3379	64 67	2262 2094	5796 5473	44·0 42·4	

The Ante-Natal Clinic. 110 expectant mothers, as against 76 during 1930, attended for the first time. The total attendances were 289, and the average attendance per session, 12.5.

Reference has been made elsewhere in the Report to the Shipley and Bingley Joint Maternity Home.

#### Distribution of Milk.

The conditions under which a free supply of milk is granted by the Committee remain unchanged. An application giving full details of the family income is made monthly, the statements checked by communicating with the employers,

and each case reviewed by the Committee on the basis of this information. One pint of milk, or a corresponding amount of dried milk, is allowed daily to children under three. The comparatively large amount spent on this service is a direct reflex of the economic conditions of the area. Some indication of the value of this part of the service will be found in the section on "Malnutrition" of the current Annual Report of the School Medical Officer.

During the financial year ended 31st March, 1932, the Committee supplied gratis 25,422 pints of cow's milk, costing £327 14s. 8d., and 2,764 lbs. of dried milk.  $48\frac{1}{2}$  lbs. of dried milk were also supplied at half cost, and 103 lbs. at quarter cost. The approximate cost of the dried milk was £220.

#### Home Visiting.

The following home visits were paid by the Health Visitors during the year:—

To expectant mothers	First Visits, 14
	Total Visits, 18
To children under 1 year of age	First Visits, 386
	Total Visits, 632
To children between the ages	
of 1 and 5 years	Total Visits, 612
Total number of visits paid	1,262.

#### OPHTHALMIA NEONATORUM.

No cases were notified during the year.

#### PUERPERAL FEVER AND PYREXIA.

One case of Puerperal Fever was notified during the year. The patient was removed to hospital, but died.

# OTHER ACCIDENTS AND DISEASES OF PREGNANCY.

Two deaths occurred. In one of these the fact of Pregnancy was not stated on the Death Certificate, but information of this fact was obtained through other sources.

#### MEDICAL BATHS.

The suite of medical baths at the Council's Swimming Baths contains a Mercury Vapour (Ultra-Violet Ray) Lamp, a Pyretic Bath, and a generalised Radiant Heat Bath, in addition to facilities for massage and local treatment of various kinds. Treatments to men are administered by the Baths Superintendent, Mr. Betts, and to women by Miss Gutbrod, Certified Masseuse, etc. The medical section is (at the request of the Ministry of Health) under the general supervision of the Medical Officer.

Medical men in the district are informed of the facilities available, and utilise the Baths for the treatment of patients suffering from chronic rheumatism, etc. No attempt has yet been made to classify patients treated according to their ailments. The following table, kindly supplied by Mr. Betts, shows the number of treatments given during the year:—

Treatment.		Male.		Female.		Total.
Radiant Heat	• • •	150	• • •	262		412
